

Travel Document Verification and Flight Booking Platform

A Smart Travel Eligibility Verification and Alert System

FEDF

Section-12

Group Number-10

Team:

Devaji Rashmika - 2520090152

Lahari-2520090004

1. Purpose

- Verify passport validity, visa requirements, and travel-document compliance before flight booking.
- Help travelers identify document-related issues early in the booking process.
- Reduce the risk of boarding denials, visa-related problems, and travel disruptions.
- Improve traveler confidence by ensuring eligibility before payment.
- Create a safer and more reliable flight-booking experience.

2. Problem Statement

- Many travelers book international flights without checking destination-specific document requirements.
- Passport expiry, missing visas, or incomplete travel documents are often discovered only at check-in or immigration.
- These issues can lead to denied boarding, financial losses, missed trips, and traveler frustration.
- Existing flight-booking platforms generally do not validate travel documents before confirming bookings.
- There is a need for an integrated system that verifies document eligibility during the flight search and booking process.

3. Goals

- Enable flight search with travel-rule indicators.
- Verify passport, visa, and travel documents before booking.
- Display a Travel Ready Score.
- Provide a dashboard for trips, passport, and visa tracking.
- Offer alerts for passport expiry and document issues.
- Reduce booking failures caused by non-compliance.

4. Scope

✓ In Scope

- Flight search and results.
- Travel-rule badges and filters.
- Travel Verification page.
- Booking Confirmation page.
- Login and Signup.
- User Dashboard.

○ Out of Scope

- Live airline/embassy data.
- Real payment gateway.
- Actual OTP delivery.
- Document upload and OCR.
- Multi-language and multi-currency support.

5. Users

- Leisure and business travelers.
- First-time international travelers.
- Frequent flyers.
- New users registering their passport details.

6. Functional Requirements

- Search flights using travel details.
- Display flight information and prices.
- Show travel compliance status.
- Filter flights by readiness status.
- Perform travel verification checks.
- Calculate Travel Ready Score.
- Provide booking confirmation.
- Support Signup and Login with OTP.
- Validate passport expiry and password strength.
- Provide a user dashboard with trips and alerts.

7. Non-Functional Requirements

- User-friendly interface.
- Responsive on all devices.
- Fast performance.
- Accessible design.
- Consistent visual theme.
- Reusable React components.
- Passport data masking for privacy.

8. Assumptions

- Data is currently mock/static.
- Users provide accurate information.
- OTP verification is simulated.
- Travel rules are prototype examples.
- Multi-user data storage is not yet implemented.

9. Acceptance Criteria

- Users can search and view flights.
- Travel-rule badges appear correctly.
- Verification checks and score are displayed.
- Document issues show alerts and actions.
- Booking confirmation is generated.
- Signup and Login work successfully.
- Dashboard information displays correctly.
- Application works on desktop and mobile.
